Parcels 3D Datasets

- ⭐ **https://skfb.ly/oyOxO** - Cryptovoxels districts 12-13-19 snapshot

openvoxels 2019 - A 3D model collection by m3org

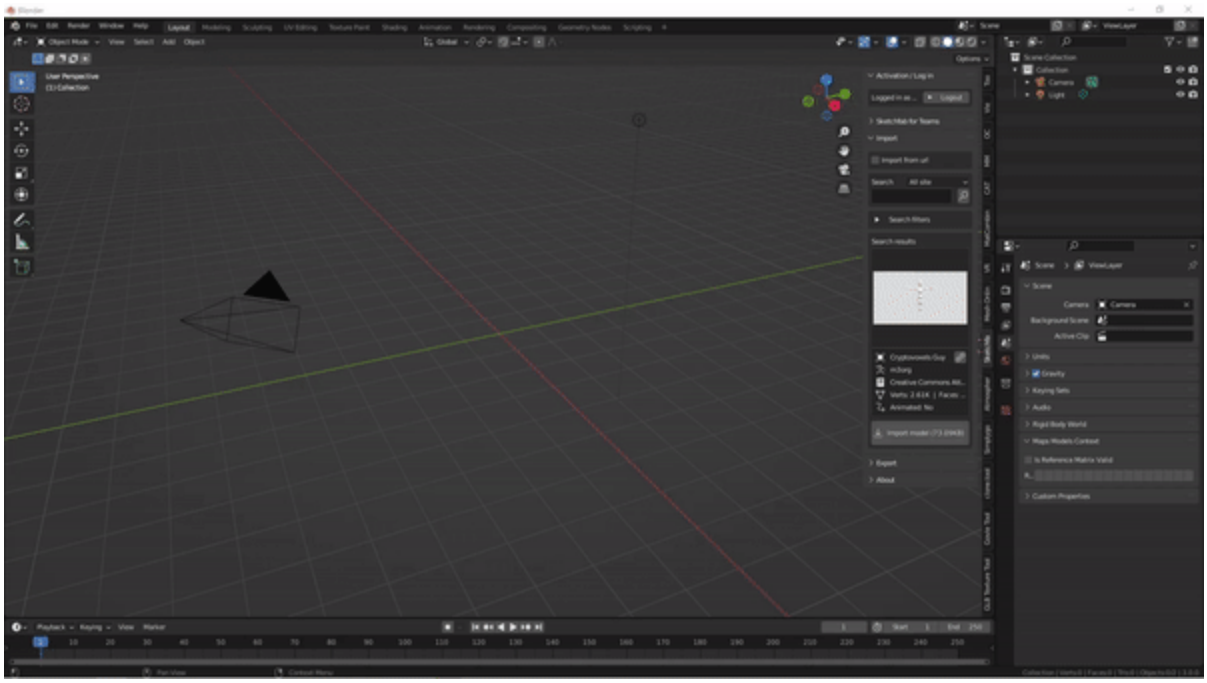

openvoxels 2019 - A 3D model collection by m3org

https://sketchfab.com

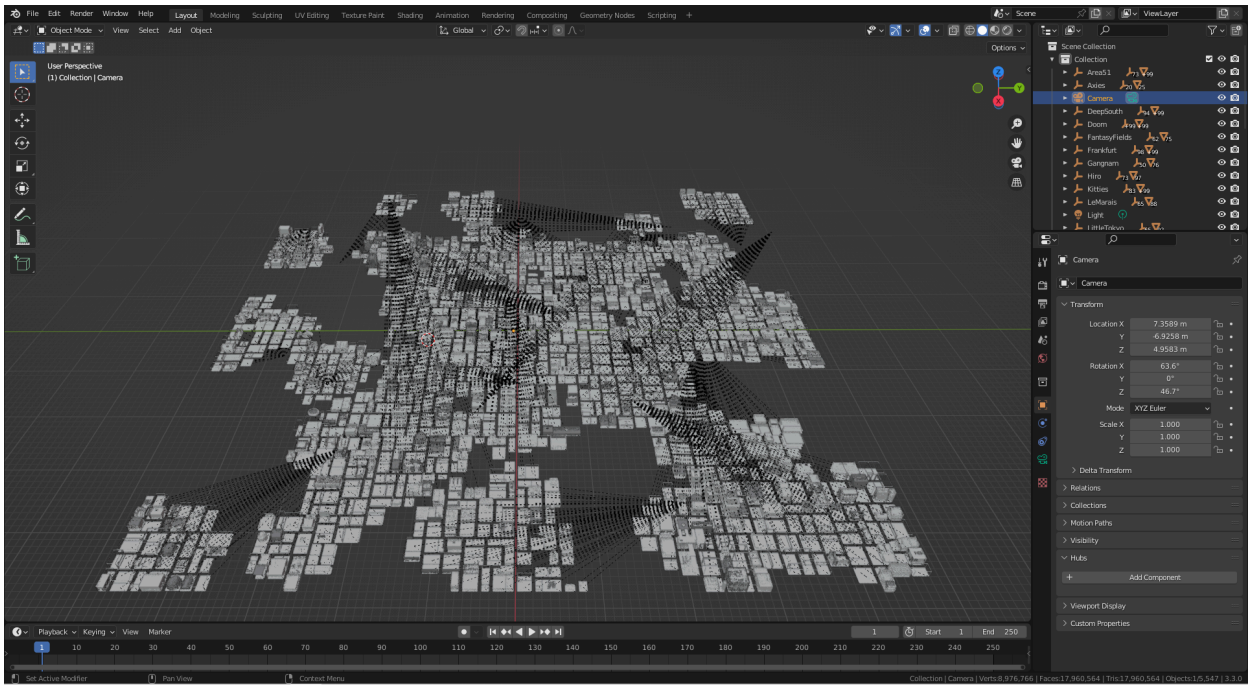

- Arweave backups - JSON data backups since 2021 stored on Arweave
- CryptoVoxelsArchive.sh - Script used to take daily data snapshots

Sketchfab is the leading 3D model sharing website on the web that many cultural institutions and museums have picked to showcase artifacts on. They offer a wide range of plugins to import models directly into your favorite 3D software easily.

Importing districts from a Sketchfab importer: https://sketchfab.com/importers

With the blender plugin you can search for `cryptovoxels 2019` and quickly import chunks from the 12-13-2019 dataset into your project.

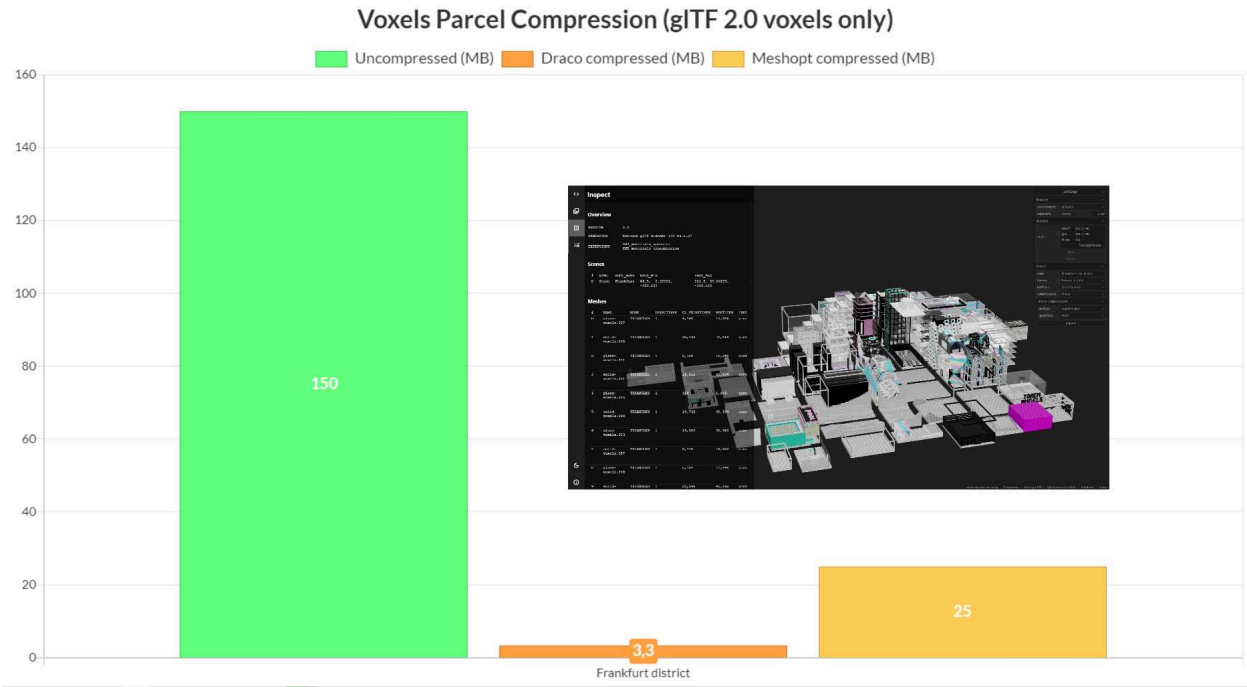

You can import as much or as little as you want. I labeled the dataset with the year it was taken as a tag for optimizing search.

We are planning to take another 3D snapshot of the world on the 3rd anniversary of the last one, **12-13-2022**, and run a buildathon alongside. Join the M3 discord if you want to help us plan..

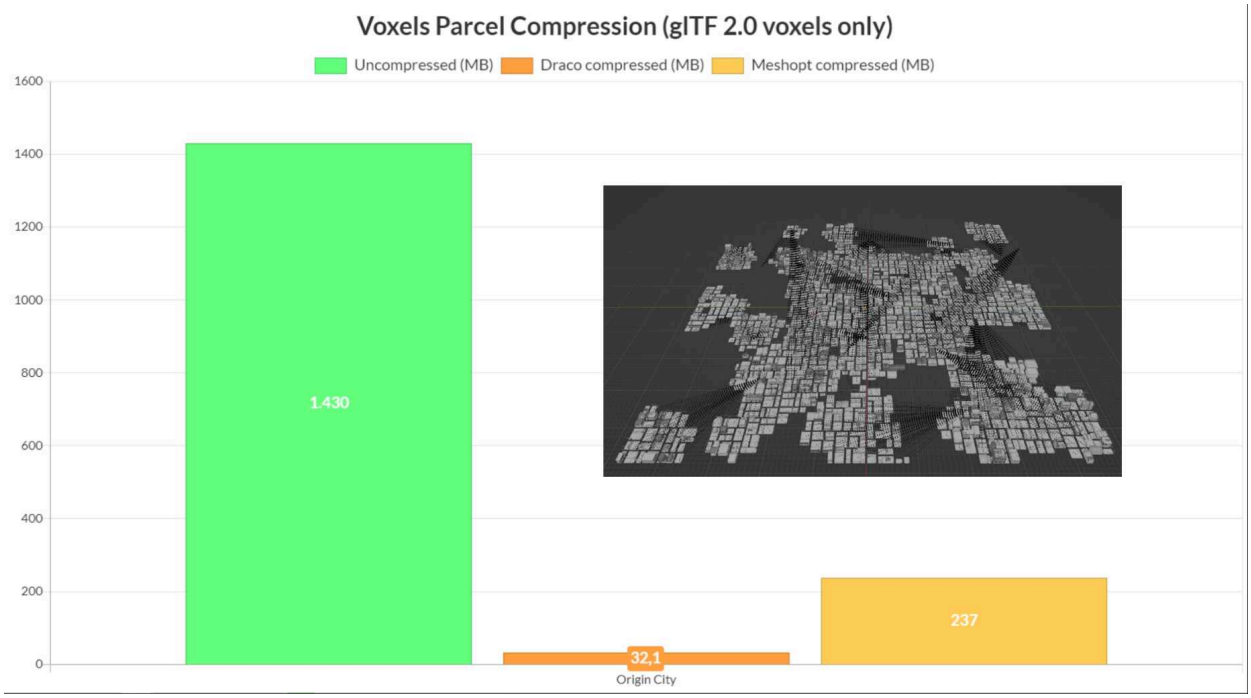

Optimization

The biggest district in the collection is Frankfurt comes in at a whopping 150mb and 1.7M triangles. I took a double look when I was able to compress this model down to 3.3mb via Draco using http://gltf.report. I could still could shave 30% with gzip as well, making the final compressed version only 2.1mb. To compare with a different method, Meshopt compression only went to 25mb and broke the collision in Hyperfy.

Comparing uncompressed to Draco and meshopt file size for Frankfurt district, the biggest district in Origin City

The only complaint I heard about Draco is that the size of the WASM library decoder may outweigh size savings for geometry <1MB. If that's all then no biggie - the size difference between uncompressed and other forms of compression like meshopt is substantial in our case.

Comparing compressed file size for the entire Origin City dataset, Draco is 32.1 MB compared to 1.43 GB uncompressed

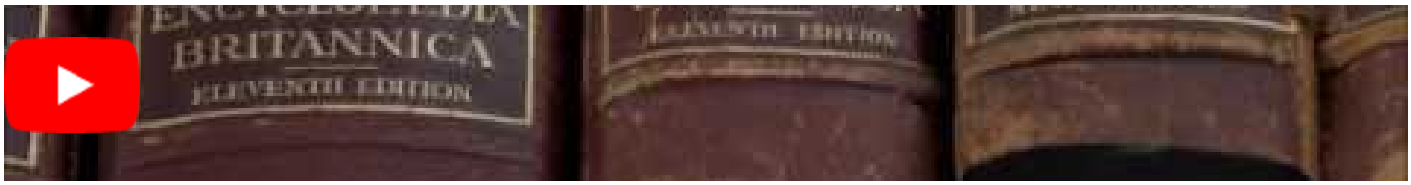

Use Cases

- Digital preservation
  - glTF 2.0 is an international standard file format for 3D models
  - Snapshot virtual worlds like the Internet Archive Wayback machine
- Create living museums
  - Recreate CV as it were during a period in time
- Alternate realities
  - See how Voxels might look with diff skyboxes or weather
- Sandbox for rapid prototyping
  - Experiment and use to pitch features
  - Good ideas can make their way back to main
- Home space decoration (scale to tabletop size)

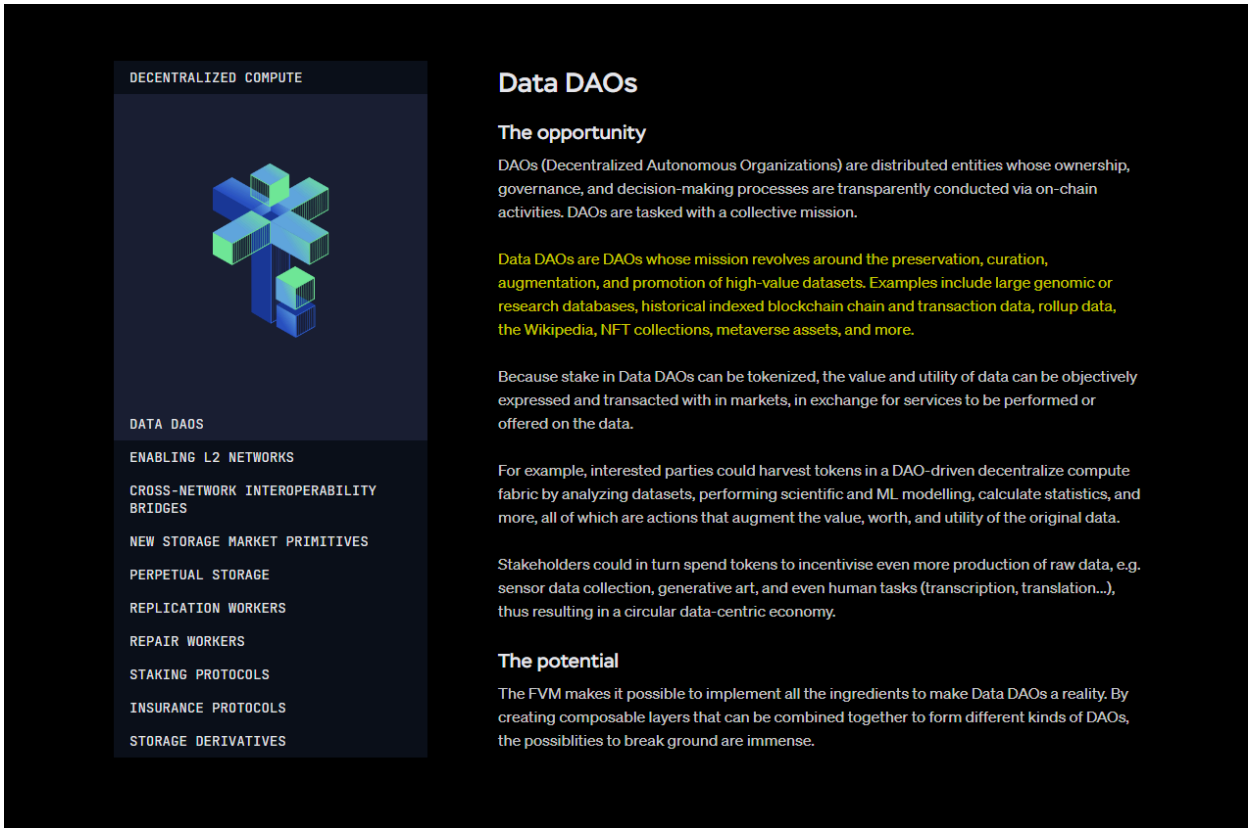

- Mixed media art projects / 3D rendering

Final Thoughts

I want to close this with various ideas that have inspired me during this part.

jin

@dankvr

Places like Helsinki have 3D data of their entire city available in multiple formats as *open data* devs are free to download and build from.

It's been used for data viz, virtual tours, VR festivals, and minecraft. Would love to see more places try this.
